

### ADVANTAGES

- Easy filter-replacement maintenance requirements
- Improves engine efficiency & availability with the widest selection of filters
- Separate filtration stages improve water drainage
- Three-stage static filter system with higher efficiency
- It offers maximum flexibility to adapt your filter solution to changing environmental/operational conditions

<b>Application</b>	Recommended in most environmental conditions
<b>Installation Options</b>	<p>Weather hoods (rain or snow)                      A droplet separator for mist &amp; moisture protection                      A pre-filter stage, typically a coalescing bag filter                      A second stage consisting of a high efficiency compact filter, F7 to F9 efficiency                      A final filter stage; a compact hydrophobic filter from F9-H13 efficiency                      Other features can be added depending on the environment, such as an anti-icing/air inlet heating system, air inlet cooling system, trash or insect screens                      Can be supplied in painted carbon steel, stainless steel or marine grade aluminum</p>
<b>Comment</b>	Contact your nearest Camfil office for sizing, staging and configurations choice. Ask us for a Life Cycle Cost evaluation based on your site conditions and/or request an on-site evaluation of your site conditions to validate the required level of protection.

Static multistage filter system provide maintenance free operations with a lot of flexibility to adapt to changing environmental conditions or operating regimes. Multiple stages increased availability, facilitate water handling at low operating pressure drops and reduce the risk of by-pass.
